Project Title	ComicCraft AI
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

ComicCraft AI is an AI-based comic creator that transforms a story idea into a structured five-panel comic, reducing manual drawing effort and making visual storytelling easier.

Project Overview	
Objective	Helps users create complete comics quickly by generating story beats and five visual panels with AI.
Scope	Covers story input, AI story generation, five-panel comic generation, consistent characters, panel review, and export or sharing.
Problem Statement	
Description	Manual comic creation requires drawing skills and significant time, and maintaining consistent characters across panels is difficult.
Impact	Reduces manual effort, speeds up comic creation, and helps users turn ideas into shareable visual stories.
Proposed Solution	
Approach	Use Python and FastAPI with Gemini for story generation and Pollinations for comic image generation.
Key Features	Five-panel comic generation; consistent character design; story and narration text in panels

	- AI-generated story and visuals - Five distinct comic stages; export and share the completed comic

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Standard PC/laptop	CPU: Standard laptop/desktop
Memory	RAM	8 GB RAM
Storage	Storage for panels and assets	10 GB available
Software		
Frameworks	Python framework	FastAPI
Libraries	Additional libraries	Pillow, requests, python-dotenv
Development Environment	IDE	Visual Studio Code
Data		
Data	User-provided story prompts and generated panel images	Local files; generated images
